

New generation of MagLev fans- ME Series

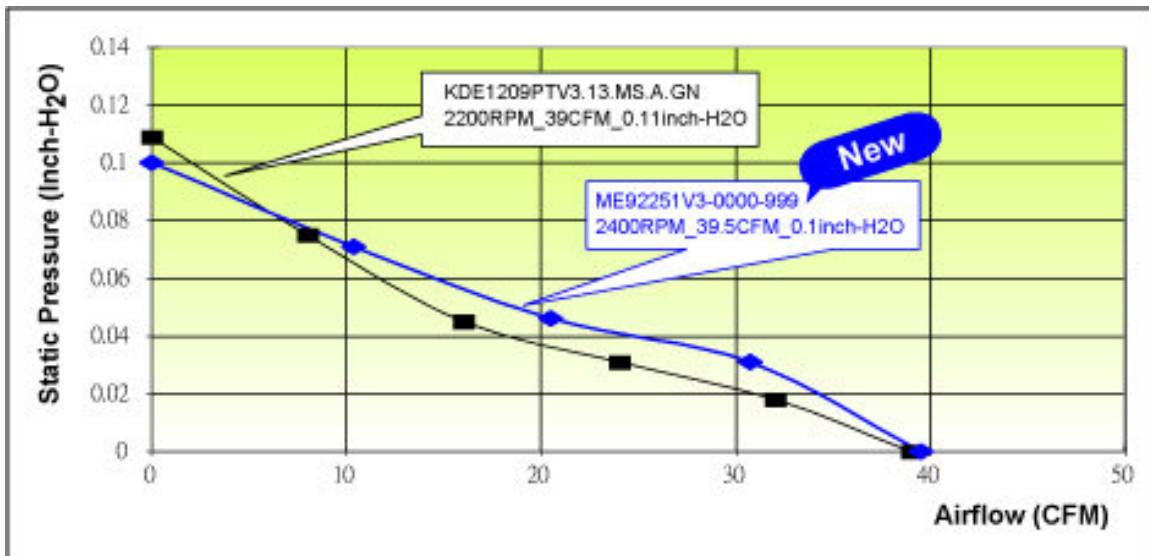

With the introduction of the MagLev technology, Sunon is offering the best optimised performance on the long-term, at the low noise level and attractive prices!

Sunon now goes one step further with the introduction of the ME series, the new generation of MagLev fans.

This series is designed and engineered with a new bearing system to maximise the air flow and the fan operating life time.

Incorporating highly precise components and new impeller design, this series offers you the best compromise between quality and price.

The below graphics shows you the difference in technical specifications for the MagLev references in 92x92x25 mm:

The standard size for ME fans goes from 80x80x25 mm to 120x120x38 mm and are available with various speeds and voltages to cover most of your needs.

Options like frequency generator and rotation detector are also available for customizing purposes.
